ABSTRACT

The MLT Pharmacy is located at National Highway, Barangay, Salvacion Panabo City, Davao del Norte encountered some challenges in its process due to its lag POS system, resulting in poor customer service, especially during the peak hours. The aim of this research is to enhance transactional processes, business operations, and procedures by recommending advanced computer technologies and Information Systems. Choosing a good method is a wise leader's work. The qualities of the MLT pharmaceutical Development Plan are speed, efficiency, effectiveness, and a solid client relationship. The Management Information System (MIS) is widely recognized as a crucial tool for enhancing business procedures and routines, and it is frequently utilized by firms globally in various functional areas. It will provide thoughts and solutions for business difficulties. Business transactions will be more efficient and speedier, making them suited for customer intelligence (CI). This will be essential for MLT Pharmacy to increase overall performance, give quality healthcare services, and satisfy the customers by making their transactions fast and smooth. The Management Information System (MIS) helps the staff improve their business process, and customer satisfaction, making it beneficial to both the Pharmacy and the customers. With the help of the proposed IT Infrastructure, which includes Computer Hardware, Operating System, Software Application, IT manpower, and network and telecommunications, it can help improve the speed of the transactions and address the problem which is to improve their IT Infrastructure and make the operational process fast and efficient.

Keywords: Business Operations, Business Process, Customer Intelligence, Management Information System, Transactional Process

1. INTRODUCTION

1.1 Background of the Study

Pharmacists are consistently named one of the most trusted healthcare providers in the US. Retail pharmacies have become convenient, accessible destinations for high-quality care, with over 90% of Americans living within five miles of one. During the COVID-19 pandemic, retail pharmacies were able to help local communities across the country, administering over 266.5 million doses of COVID-19 vaccines. This has changed how many Americans view pharmacists and created an opportunity to continue providing necessary care in a pharmacy setting. Most Americans agree pharmacists should provide certain healthcare services when primary care is unavailable. Pharmacies are essential for modern society as they stock and sell a variety of medicines[1]. Thus, they provide prescription services and ensure the safe dispensing of treatment in the correct dosage while keeping it clean and preventing contamination. It takes the right business personnel to handle this type of business.

MLT Pharmacy is a type of business wherein they sell daily necessities, prescription, and over-the-counter medicines. Their company was first established in 2019 and located at Tagum, and it was operated and managed by the owner's family, Mrs Miriam Orcullo-Dela Pena, which follows through her heir. Due to her perseverance and dedication, she pursued continuing their business here, located on National Highway, Barangay, Salvacion, Panabo City, by the year 2020.

This business aimed to give customers' needs in a less-hassle way, enhance patient care and promote wellness to society. At MLT Pharmacy, you can ensure they provide you with the essence of a well-knowledgeable pharmacy.

1.2 Current Routines and Business Process

1.2.1 Current Routines

In an interview at MLT Pharmacy, they are always open from Monday to Sunday from exactly 7:00 am until 9:00 pm. There should be more than one employee assigned and tasked to ensure that prescription drugs given to patients are appropriate, advising and answering patients' queries and confirming that the medicine supply complies with the law.

They must also wear their company uniform to ensure safety and quickly determine the employees. Observing their personnel, they greeted the customers with friendly smiles. And at peak hours, when many customers arrive, they remain friendly and professional.

When numerous customers arrive, they have a take-a-number system in which customers will be given a number and wait for their call. MLT Pharmacy always ensures that the customer's needs will be met and that their transactions will secure safety and earn customer loyalty.

1.2.2 Business Process

Customer must address their order. If the medicine requested is an antibiotic, the customer must present a prescription receipt to ensure patient safety. If the customer's order is available, the items will be scanned and directed to their system to calculate the item's total amount.

PWDs and Senior citizens should present their respected IDs to the employee to ensure a discounted rate when paying the total cost of the order. When receiving the order, the customer also gets a receipt. Most importantly, MLT Pharmacy ensures they don't encounter any events that could affect the business.

Start Time	End Time	Task	Duration
7:00 am	8:00 am	Cleaning the store	1 hr.
8:00 am	9:00 am	Checking and reporting for the available products	1 hr.
9:00 am	10:30 am	Customer arrival	1 hr. and 30 mins.
10:30 am	11:00 am	Waiting for the second employee	30 mins.
11:00 am	12:00 am	Continuation of works	1 hr.
12:00 am	1:00 pm	Lunch break	1 hr.
1:00 pm	4:00 pm	Resume of work	3 hrs.
4:00 pm	7:00 pm	Peak hours	3 hrs.
7:00 pm	8:30 pm	Checking for products	1 hr. and 30 mins.
8:30 pm	9:00 pm	Cleaning and Store Close (No Overtime)	30 mins.

Table 1: Event Table of MLT Pharmacy

1.3 Problems Found

- **Numbering System.** The problem that mostly caught us is their queuing system where customers will be given numbers and wait for their call.
- **Customer Service.** As stated by them, when many customers come and wait in line, other customers get irritated and are forced to leave and buy from another pharmacy.
- **Improvement of IT Infrastructure.** They also addressed their issue regarding their POS System which hangs back at times especially when peak hours are approaching.

1.4 Goals and Objectives

1.4.1 General Objectives

Researchers would likely present an improved IT Infrastructure to provide services and assist the management in their transactions with the help of a Management Information System (MIS). Enhance the organization's processing system, making it more convenient, secure, and efficient. Satisfy the customers by providing their needs and making their transactions fast and smooth.

1.4.2 Specific Objectives

The specific objective of this study is to help improve their business process and gain customer loyalty. The researchers desire to:

- Replace their traditional numbering method by applying the modern queuing system.
- Making the transaction faster for the convenience of the customers.
- Upgrade their computers for more efficient and better performance.
- Secure the company's essential files with the use of data base.

1.5 Organizational Structure

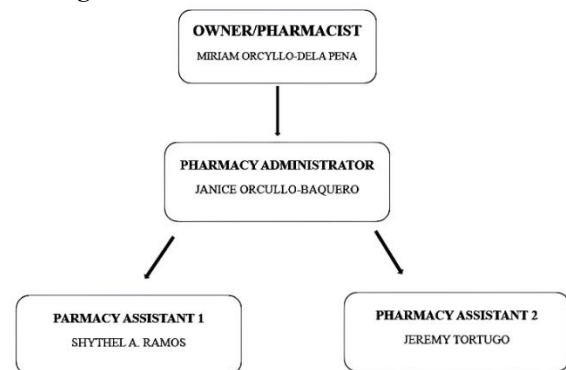

Figure 1: Organizational Structure of MLT Pharmacy

MLT Pharmacy has an Owner/Pharmacist who runs and organizes the flow of the business and other branches, followed by the Pharmacy Administrator and their Assistants who assists the Owner/Pharmacist and manages the Pharmacy.

2. PROPOSED INFORMATION SYSTEM

2.1 Review of the Related Study

2.1.1 Related Literature

Most pharmacies use a computerized perpetual inventory system to maintain the stock of medications in the pharmacy. A perpetual inventory system is a method of recording the quantity of a

particular medication continuously as prescriptions are filled[2]. This system allows businesses to have a real-time view of their inventory levels and to track the movement of inventory in and out of the business.

Walgreen Pharmacy uses Perpetual Inventory System which is useful because it helps ensure that the right medications are always in stock, and that expired or obsolete medications are promptly removed from the inventory[3]. This can help improve patient safety and reduce waste. The company's inventories consist of current assets reported in descending order of liquidity.

Mostly pharmacies in Batangas are also using Perpetual Inventory System. It specifically seeks to determine the level of efficiency of the current inventory management system and the effect of using perpetual inventory system on the inventory management of the drugstore.[4] The drugstore was able to have better control over its inventory levels, reduce stock-outs, and improve overall efficiency. PIS also allowed the drugstore to quickly identify and remove expired products, which improved patient safety.

A perpetual system keeps inventory balances correct and gives you a more accurate set of financial statements throughout the year – most importantly, your cost of goods sold which directly impacts your tax position[5]. An efficient transaction process can save customers time and boost their trust in the pharmacy's operations. A poorly working POS ordering system, on the other hand, can cause dissatisfaction delays, and errors, negatively hurting customer satisfaction.

2.1.2 Related System

Management Information Systems (MIS) are important in all three phases of strategic management: strategy formulation, implementation, and performance feedback. In the formulation phase, MIS is used to evaluate strategic options and their viability. In the implementation phase, MIS is used to support financial analysis and monitor results. In the control and feedback stages, MIS provides information on success and failure drivers.

The main characteristic of the interactive use of Management Information Systems (MIS) is the ongoing exchange of information between different levels and departments within the organization[6]. This type of use is thought to promote organizational learning and encourage innovative reactions to changes in the environment.

Apollo Pharmacy uses an MIS to manage its inventory levels across all its stores. The system tracks the stock levels of different products and generates alerts when the stock levels fall below a certain threshold. This helps Apollo Pharmacy to ensure that it always has the right products in stock to meet customer demand[7]. The MIS used by Apollo Pharmacy helps the company to manage its operations more efficiently and effectively, providing better services to its customers and driving business growth.

The Department of Health of the Philippines uses Management Information System for public health programs, vital statistics, mortality, and notifiable diseases. They used a computer application developed for them. It is expected to feedback information outputs to the reporting units and to forward a copy of the data[8]. Management Information Systems refer to systems that primarily concentrate on the management of databases. Their functions include gathering, encoding, modifying, deleting, safeguarding, and ensuring the accuracy and consistency of data. With these systems, even an ordinary user can choose from a set of analytical outputs and automatically create health service reports that the Department of Health of the Philippines benefits on the system they used.

MerryMart Group Pharmacy increases its trade volume in pharmacy and prescription drug products; this transaction results in considerable cost efficiencies as MerryMart strives to provide better value to its consumers and stakeholders[9]. By offering high-quality products at a lower cost, the company aims to increase customer satisfaction and loyalty while also benefiting its shareholders when using MIS. The company can sell products at a lower cost while maintaining its profits. This could be due to a variety of factors such as economies of scale, improved supply chain management, or negotiation of better prices with suppliers. From this point, the company aims to increase customer satisfaction and loyalty while also benefiting its shareholders.

2.2 Proposed Information Systems

Management Information Systems (MIS) provide a business with different types of reports, such as inventory, cash flow, and trend analysis. It also monitors and improves their current condition and financial situation. MIS also helps businesses automate record-keeping and avoid manual data entry, which allows them to gain useful insights from their daily operations[3]. Using MIS, businesses can efficiently manage their resources, employees, stocks, transactions, and customer demands.

2.2.1 Functionality

- Offer a more efficient IT infrastructure.
- Provide accurate data and order in every transaction to the manufacturer.
- Meet the needs of managers, staff and customers.
- Employees can update and share reports, as well as disseminate vital information about upcoming developments and concerns across the company.

2.2.2 SYSTEM ARCHITECTURE

Our system architecture uses MIS that conducts the manufacturer on how to manage their organization. In this process, it collect orders from customers directly to the employee, the employee records the order, prepare the item being purchased, print receipts, and track information. Primarily, MIS stores data in a secure manner.

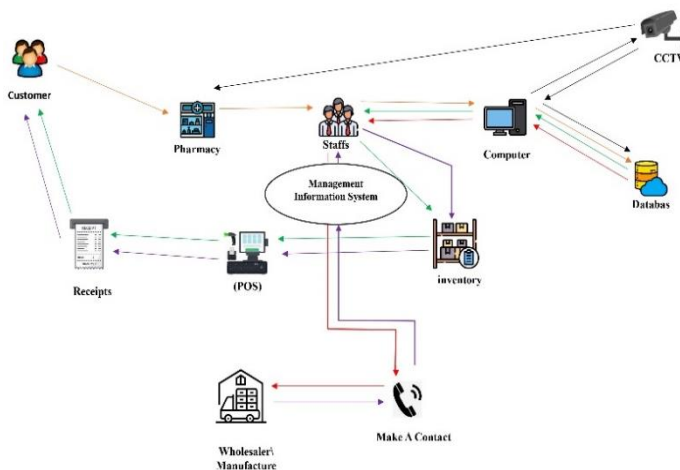

Figure 2: System Architecture of MLT Pharmacy

2.2.3 Cost Structure

Cost Description	Cost
Development Cost	P80,000
Maintenance Cost	P20,000
Manpower Cost	P30,000
Operational Cost	P25,000
Overall Cost	P155,000

Table 2: Cost Structure of MLT Pharmacy

Table 2 shows the total cost to the company if the suggested major upgrade is used. This improvement is not prohibitively expensive when considering its benefits to the company and, more

importantly, to the overall customer experience. The advantage of this upgrade is that it allows employees to work more efficiently, eliminates lag, transitions from manual number queuing to electronic/computerized number queuing, and speeds up the process, which is very helpful in processing customers' orders so that they do not have to wait too long.

3. PROPOSED IT INFRASTRUCTURE

3.1 Proposed Computer Hardware

Desktop Computer[10]

A desktop offers great versatility as small business PC, supporting the needs of employees who need the extra performance desktops offer.

Computer Hardware	Specification	Unit Cost	Quantity	Total Cost
Desktop Computer	Brand Name: HP Processor: CORE I3-10100 (3.6GHZ) Ram: 8GB Hard Drive: Graphic Coprocessor: GT730 2GB	P33,990.00	1	P 33, 990.00
Overall Cost				P33,990.00

Table 3: Propose Computer Hardware for MLT Pharmacy

A management information system combines all of the components needed to efficiently run a company. An organization can design a MIS that matches its specific goals and requirements by carefully selecting the appropriate technology, software, data, procedures, and people.

3.2 Proposed Operating System Platform

The researchers recommended a computer system that is very fast, easy to use, safe, and secure, and can work with different software programs.

Windows 10

Microsoft developed an operating system that not only enables the use of software programs but also includes already integrated security tools like an antivirus program, a safety net, and security features for the internet[11].

OS Platform	System Requirements	Unit Cost	Quantity	Total Cost
Window 10	Processor: 1GHz RAM: 1GB for 32-bit or 2GB for 64-bit Graphics Card: Direct 9 Graphics Device Display: Pixels	₱14,999.00	1	₱14,999.00
Overall Cost		₱10,000		

Table 4: Proposed Operating System Platform for MLT Pharmacy

3.3 Proposed Enterprise Software Applications

This specification outlines the key features, technology, implementation, and maintenance requirements for a management information system. It is designed to provide organizations with real-time access to information, analytics capabilities, and collaboration tools to make data-driven decisions.

Enterprise Software Application	Specification	Unit Cost	Qty	Total Cost
Management Information System	It provides a complete explanation of system design products, beginning with the outcomes of logical design operations.	₱10,000	1	₱10,000
Overall Cost		₱10,000		

Table 5: Proposed Enterprise Software Application for MLT Pharmacy

3.4 Proposed Network & Telecommunications

The researchers recommend this form of network and telecommunications since it will benefit this type of business. According to the investigation, their major problem is their slow process. As a result, we developed a plan and possible effects so that the firm could reach its consumers while still maintaining efficient technological connectivity.

Router

A router is a physical or virtual device that connects multiple packet-s, witched computer networks. A router examines the data packet's destination Internet Protocol address (IP address), calculates the optimal path for it to take, and then forwards it[12].

Network Switch

Network Switch links network devices, allowing them to communicate via exchanging data packets. Switches are hardware devices which

handle physical networks or software-driven devices[12].

Network and Telecommunication	Specification	Unit Cost	Qty	Total Cost
Router	TP-LINK TL-WR840N Wi-Fi Router	₱620.00	1	₱620.00
Network Switch	TP-LINK TL-SG108 8 Port	₱1,795.00	1	₱1,795.00
Overall Cost		₱2,415.00		

Table 6. Proposed Network & Telecommunication for RLT Pharmacy.

3.5 Proposed IT Manpower

MLT Pharmacy is in need of an IT Technician to understand how computers function and operate effectively. Pharmacy Cashier also creates a big help as they are responsible for processing and accepting payments, as well as issuing receipts to customers as they leave with the items they purchased[13].

IT Manpower	Job Description	Proposed Salary
IT Technician	Maintaining computer systems, resolving issues, and repairing hardware for the organization.	₱21, 290 per month
Pharmacy Cashier	Customers' sales are processed, you may recover filled pharmaceutical containers, address payment issues, and run a cash register.	₱13,604 per month
Overall Cost		₱34,894 per month

Table 7: Proposed IT Manpower for MLT Pharmacy

4. CONCLUSION AND RECOMMENDATION

4.1 Conclusion

MLT Pharmacy is a business branch in Panabo City, which has two branches in Tagum City. The business generally matters about selling medicines. The researchers found some difficulties in dealing with customers, especially in peak hours, using traditional numbering system, and their computer are experiencing latency. This business

proposal will help the business find possible solutions to the core problems by applying the proposed system, the Management Information System. This proposed system will regulate the current problems that the industry encountered and change the way how they deal with customers by making it more convenient and modern. The researchers are grateful that they were given a chance to help the company, and hopefully, the business proposal gives them a great opportunity and success.

4.2 Recommendation

This study has shown that in order to improve their daily process, they must introduce the proposed business plan to improve their workflow. The researchers zealously recommend that they should be familiar with the proposed system to achieve operational excellence. The study encourages to participate in developing MIS and make a significant contribution to a modernized system. Knowledge experts (including IT Technicians, System Analysts, and Pharmacists) can work together to become more knowledgeable of administrative task criteria in order to produce more effective MIS in the pharmaceutical industry.

ACKNOWLEDGEMENT

With boundless love and appreciation, we would like to extend our full gratitude and appreciation to everyone who helped bring this study into reality and for the success of this research. Above all, to our almighty God, this research would not be possible without His guidance and without bestowing us the strength, knowledge, wisdom and good health. And spiritually, even though we have felt all the negativity in the journey of the making of this study, thank you for giving us advice to always have faith in God in times of struggles and misunderstandings.

Furthermore, we are grateful and sincerely thankful to Mr. Philip John L. Paja for his guidance, understanding, patience, and for letting us submerge ourselves in a pool of knowledge, valuable experience, and for sharing his expertise to us, the researchers. We are in your debt. We would also like to thank the MLT Pharmacy in Panabo City for allowing us to conduct our data gathering and interview for our study and their warm assistance throughout the data gathering process.

Lastly, to our participants who actively participated in this study, thank you for lending us your time, availability, and for sharing your thoughts and sole. To God be the Glory!

APPENDICES

Letter of Approval

 **DAVAO DEL NORTE STATE COLLEGE**
Institute of Computing

April 18, 2023

MIRIAM ORCULLO-DELA PENA
Manager
MLT Pharmacy
Salvacion, Panabo City,
Davao del Norte, PH

Dear Mrs. Dela Pena,

Warmest greetings!

We are first-year students of Davao del Norte State College (DNSC), currently pursuing a Bachelor of Science in Information Systems this 2nd Semester of the School Year 2022-2023. As part of our course subject requirement for **IS121 – Fundamentals of Information Systems**, we are asking your humble office to grant us permission to implement an **Information Systems Development and Technology Plan** for your company. This is to know the current situation, especially the problems with the current traditional procedures, and propose an Information System that will ease the flow of your business and its processes. Part of our development will include an interview session, environmental scanning, a business process analysis, and an on-site visit (can be virtual) if applicable.

Your kindness and open participation will be very much appreciated. Thank you for taking the time in reading this letter of approval. This will really help us develop our skills in accordance with the standards of your company and our college. We wish nothing but success to your organization!

Sincerely yours,

CLYDE M. BALURAN Student
ANDRIAN A. EBDANI Student
MEL EVAN P. ENDERES Student
